SNAP BEANS!
Of course, plant them until Aug. 15

The average date of the earliest killing frost in this vicinity is about October 25th. Therefore varieties that come into production in 60 days or less can be planted with reasonable safety until August 15th—later further south.

(Prices of all beans listed below.)

17. BOUNTIFUL. Long, flat, crisp and tender pods ready in 45 to 48 days. Ours is an extremely prolific strain; mildew and rust resistant.

28. STRINGLESS BLACK VALENTINE. Probably the safest of all Snap Beans for late fall or early spring planting since it withstands lower temperatures than most other varieties. Round, meaty pods, tender and delicious. 45 days.

18. BURPEE STRINGLESS. Meaty and fiberless, this standard round-podded variety has been in popular demand fall and spring since before 1900. We take a great deal of pride in our fine strain of Highland Idaho grown Burpees. 48 days.

24. TENDERGREEN. A good producer of long, handsome dark green stringless Beans. Immensely popular since its introduction only a few years ago. 54 days.

27. PLENTIFUL. Brittle, stringless, straight pods, long and dark green. Bronze award winner in All-America trials in 1938, the year it was introduced.

48. PENCIL POD WAX. Round, thick, stringless, rich yellow pods on productive plants. 48 days.

46. SURECROP WAX. A prolific and dependable wax variety producing round-podded beans of fine quality and flavor in about 48 days.

107. KENTUCKY WONDER. (Pole Beans.) This old-time favorite is justly popular because of its fine flavor. In rich loamy soil Kentucky Wonders will mature within a day or two of the quickest Bush Bean.

**F67 Orchard Grass (Onion Free)**

One of our most productive grasses for the Middle South for hay and pasture. While succeeding well in almost all fertile soils it does best on loamy and moderately stiff uplands. It is a long-lived grass, lasting with good treatment about thirty or forty years; yet it is easily exterminated if the land is wanted for other purposes. Sow 25 to 30 lbs. per acre alone or 12 to 15 with other grasses and clovers. Cut when in bloom. Prices (Onion Free Seeds): Lb., 60c; 5 lbs., $2.50, postpaid. **F97 Alfalfa**

While Alfalfa is a relatively expensive crop, the first cutting usually returns about double the cost of seeds, lime, fertilizer and planting. A good method is to lime the land and plant an annual legume crop that can be thoroughly disked, not turned, in preparing the Alfalfa seed bed. Use 20 to 35 pounds (not more) borax per acre and drill 25 to 40 pounds of thoroughly inoculated seeds per acre. Roll or culti-pack after seeding. At seeding time use 500-700 pounds 2-12-6 and 8-10 tons barnyard manure if available and not weed infested. Apply 400 pounds 0-12-12 annually thereafter. Always leave the Alfalfa stand 6 inches tall or more for winter since any closer cutting invariably results in severe damage. We offer 99½ per cent pure or better seeds, germinating 90 per cent or more, free of noxious weeds as follows: Lb., 70c; 4 lbs., $2.30, postpaid. Not prepaid, 5 to 159 lbs. at 51c lb.; bag lots (160 lbs.) or more at 49½c lb. BORAX. Prices: 25-lb. bag, $2.00; 100-lb. bag, $6.00.

[5]
TULIP FORCING

Use a 5-inch pot for 3 to 5 bulbs; a 6-inch pot for 5 to 6 bulbs, or an 8-inch pot for 8 to 10 bulbs.

Average garden soil mixed with leaf-mold or thoroughly rotted cow manure is well adapted to Tulip forcing. If mixture is not friable, add sand. Plant September to November for succession of bloom.

Place coarse material, such as broken pots or gravel in the bottom of the pots to insure ample drainage, then fill pots about three-fourths full of soil. Do not pack. Place bulbs and press down till the tops are about three-fourths of an inch below the top level of the pot, finish filling with soil and work firmly around bulbs. The top of bulbs should be covered. When planting has been completed, enough space should remain between the soil and top of pot for watering. Water thoroughly. At least six weeks should elapse before the bulbs are ready to be taken indoors. The pots should be stored in a cold frame, under-neath shrubby or beside a wall and covered with straw or similar material to a depth of 6 to 8 inches.

If stored outside, rains will generally keep the soil moist. Care should be taken to see that it does not become dry. As soon as good root sys-tems have developed and the tops show color they are ready to be car-ried indoors. Place pots in a cool room for several days, later trans-ferring them to temperature of about 65° F. Keep water on heating units and elsewhere to maintain humidity. Prevent freezing.

High and fluctuating tempera-tures, dry air, insufficient light and too much or too little water are detrimental. Avoid strong sunlight. A light, airy, humid room with a mild temperature should prove ideal.

Carefully kept notes as to date planted, soil used, length of root- ing period, temperature, etc., will be of value in future plantings.

ABOUT TULIP SUPPLIES

As this catalog goes to press we find it impossible to determine with any degree of certainty, just the varieties of Tulips that will be available this fall. We have planned and hope to supply the varieties listed on these two pages. This may not be possible, however, and we therefore respectfully request that our friends instruct us on each order: “SUBSTITUTE” or “DO NOT SUBSTITUTE.”

In the absence of these instructions we will understand and reserve the right to substitute with a similar variety in case the variety ordered is not in stock. Refunds will be made promptly for any variety we are unable to supply on orders marked “DO NOT SUBSTITUTE.”

CITY OF HAARLEM. One of the outstanding Tulip intro-ductions of recent years. Typically Darwin in shape and size, this is the reddest of red flowers. Excellent texture; tall, strong stems. 3 bulbs 60c; 6 for $1.15; 12 for $2.20; 25 for $4.00; 100 for $14.50, postpaid.
